Allowable Subject Matter

Non of the prior art on record teaches or fairly suggests the rules of the DC and the AC predictions such as if the top-left block, the left block and the top block are intra-coded, the selected DC predictor depends on respective DC values of the top-left block the left block, and the top block; if the top-left block is not intra-coded but the left block and the top block are, intra-coded, the selected DC predictor depends on the respective DC values of the top block and the left block; if the left block is not intra-coded but the top block is intra-coded, the selected DC. predictor is the DC value of the top block; if the top block is not intra-coded but the left block is intra-coded, the selected D.C predictor is the DC value of the left block; if the left block is not intra-coded and the top block is not intra-coded, D.C prediction is skipped from the current block; obtaining a DC value for the current block, wherein the obtaining comprises; if DC prediction is skipped for the current block, using the DC differential as the DC value for the current block; and if DC prediction is used for the current block, adding the selected DC predictor to the DC differential[[.III and using the DC value in reconstruction of the current block. as recited in Claims 22, 26, 64, 69,78 and 83. The closest prior arts of record US 5974184, US 5959674, US 20040141654 and US 6215905 shows the AC and DC predictions using the techniques of

differencing and threshold but none of them select the DC and AC values as recited in the Claims 22, 26, 64, 69,78 and 83, therefore it is allowable subject matter. Dependent Claims 24, 29-32, 65, 67, 72-75, 79, 81 and 85-91 are allowed being dependent on the independent claims.
